

1. Revision Control System or RCS
2. Repository or repo
3. server
4. client
5. Working copy
6. Patch or Patch Set
7. Distributed Version Control System

1. A process and tools for managing changes.
2. A directory containing files and directories, a historical record of changes and the changes themselves.
3. A central location for storing a repo.
4. A user of a server.
5. A copy of the repo that is used by a client to make changes.
6. Changes that can be applied to a repo.
7. RCS that allows clients to make changes and exchange patch sets without consulting a server.
